AI-focused Product Engineer transitioning into AI Product Management | 2.5 years building cloud-native and LLM-powered systems at AVEVA. Combining deep technical fluency in LLMs, RAG, and AWS with structured product thinking through HelloPM Fellowship and business education at SDA Bocconi.Targeting AI PM roles in energy tech, B2B SaaS, and industrial AI — where engineering depth and sustainability thinking drive product differentiation.

EDUCATION

SDA Bocconi School of Management, Milan, Italy — Jan 2026 – Dec 2026
MSc Sustainability Management

BMS College of Engineering, Bangalore, India — Aug 2019 – Jul 2023
B.Eng. Mechanical Engineering | CGPA: 8.0/10

EXPERIENCE

AVEVA, Bangalore, India — Jun 2023 – Jan 2026
R&D Member of Technical Staff – Product Development

- Improved platform reliability by automating test coverage scripts, reducing production defects by ~35% and cutting average CI/CD feature delivery time by ~20% via Azure DevOps pipelines.
- Enabled cloud region expansion by deploying scalable data pipelines, improving system availability and reducing user-reported incidents by ~25% through real-time pipeline status notifications.
- Designed a lightweight Chisel Ubuntu container image, reducing cloud footprint by ~60% and enabling faster, more secure deployments — directly improving end-user onboarding reliability.

CellStrat, Remote — Mar 2021 – Aug 2022
AI Researcher & Engineer

- Delivered predictive ML models for client analytics; translated business requirements into model specifications and communicated findings to non-technical stakeholders.
- Collaborated with a medical professional to build a hip X-ray keypoint detection model, applying computer vision to clinical decision support.

PRODUCT MANAGEMENT TRAINING

HelloPM AI PM Fellowship — Mar 2026 – Present
AI Product Management Fellow

- Practised end-to-end AI product delivery across 3+ domains (consumer AI, enterprise SaaS, developer tooling): built PRDs, defined OKRs, ran user research, and applied RICE scoring for prioritisation and metrics-driven iteration.
- Developed GTM roadmap for an LLM-powered B2B enterprise knowledge tool; evaluated build-vs-buy trade-offs and mapped cross-functional dependencies across engineering, design, and GTM teams.

PRODUCT CASE STUDIES

AI Food Discovery Feature – Zomato | Consumer AI / D2C — HelloPM, 2026
PRD • User Research • RICE Prioritisation • Success Metrics

- Identified decision fatigue as the core drop-off driver via user persona mapping and JTBD analysis; designed an LLM-powered contextual recommendation feature, evaluating rule-based vs. LLM trade-offs across latency, personalisation, and cost dimensions.
- Prioritised scope using RICE scoring across 5 solutions; defined success metrics (CTR +15%, order conversion +10%) and guardrail metrics (recommendation diversity, latency ≤2s) to prevent UX regressions.

AI-Driven ESG Intelligence Platform – Sustainability + AI | B2B SaaS — IAC Milan, Oct 2024
Product Strategy • System Design • Stakeholder Communication • Compliance

- Identified enterprises spending 200+ hours per reporting cycle on manual ESG extraction; conceptualised an LLM-based scoring system automating GRI/TCFD-aligned reporting across structured and unstructured industrial data pipelines.
- Presented AI product roadmap at the International Astronautical Congress 2024; received domain expert validation and used feedback to refine feature prioritisation and stakeholder communication strategy.

Cloud-Native Container Optimisation – Developer Platform | DevTools / Infra SaaS — AVEVA, 2024
Infra Product Thinking • Developer Experience (DX) • Trade-off Analysis • AWS

- Reframed slow-deployment engineering friction as a DX product problem; built a minimal Chisel-based Ubuntu image reducing container size by ~60%, improving deployment speed and AWS access-control scalability — then evaluated security, size, and maintainability trade-offs to inform future platform decisions.

SKILLS

AI / ML: LLMs, RAG, Embeddings, Vector Databases, Semantic Search, ML/DL, Data Quality Automation
Cloud & Engineering: AWS (Lambda, S3, EC2, DynamoDB, CloudFront), Azure DevOps, Docker, REST APIs, SQL, AWS SAM
Languages: Python, C#/.NET, TypeScript, JavaScript
Product: PRDs, Roadmapping, OKRs, Prioritization, Agile/Scrum, User Research, KPI Modelling, Stakeholder Mgmt, Product Metrics
Spoken Languages: English (C1), German (A2), Hindi / Kannada / Telugu (Native)
